

What is OmniJoin Private Cloud?

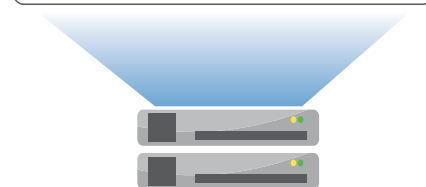

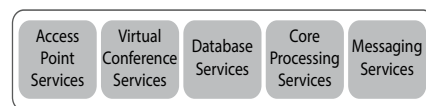

OmniJoin[®] web conferencing from Brother delivers high quality, highly secure voice, video and collaboration through web meetings, in our public cloud or your own private cloud.

Have you thought about the different types of sensitive information your employees are discussing, recording and sharing during web meetings? Intellectual property, potential acquisitions, financials, sales deals or customer information?

Sometimes a public cloud solution is just right, but when security is a concern, remember that web conferencing is subject to the same vulnerabilities as any other public cloud service.

Think Before You Meet

OmniJoin Private Cloud is a completely secure, on-premise conferencing solution that provides you all of the features and benefits of our public cloud web conferencing service, but behind your firewall. By building a conferencing service in a private cloud, we are able to offer you a solution that meets your organizational requirements and demands for physical and virtual security, compliance, performance and administration.

Utilize your own physical or virtual infrastructure, no special hardware required

OmniJoin Private Cloud provides peace of mind by giving you complete control over the location of meeting documents and recordings through the on-premise Access Point Server (APS) and Virtual Conference Server (VCS).

By maintaining control over the location of these core modules, as well as the database and web services, you have taken back the control and security of your corporate web meetings.

Brother International Corporation is one of the premier providers of products for the home, home office and office.

We Make Private Cloud Easy

We have maintained a focus on 'easy' for everything from implementation to maintenance to support, because we understand the time and resource constraints you are under. An implementation of our Private Cloud solution will only require a few clicks and a few hours of your time. And unlike many of our competitors, *we do not require any special hardware, limiting your upfront investment and reducing your capital expense.*

Security

- Dedicated conference resources
- Meet security and data privacy requirements
- HTTPS and TLS encryption
- Deprovision on your terms

Control

- Meets many compliance standards (HIPAA, SCORM, FIPS-140, etc.)
- Choose the location of APS and VCS
- Deactivate features for users, such as recording or cloud storage

Performance

- Optimize the meeting experience for your corporate requirements
- Utilize your own servers, bandwidth and networks

Administration

- Enterprise level reports and dashboards
- SSO and directory integration
- Maintain logs for auditing purposes
- Premier support included

Training & Support

Each OmniJoin Private Cloud customer receives membership in our **Customer Care Program** for the life of your license. Training and user adoption is as important to the success of your web conferencing service and the solution itself, so we have created a program that ensures all admins and users have the resources they need. Some of the key program elements include:

- Implementation Assistance
- Personal Success Advisor
- Critical Meeting Facilitation
- Public Training Sessions
- Private Training Sessions
- Corporate Branding Customization
