

OmniJoin Interoperability

OmniJoin web conferencing from Brother delivers high quality, highly secure voice, video and collaboration through web meetings, in our public cloud or your own private cloud.

Brother International Corporation is one of the premier providers of products for the home, home office and office.

Connect to Your Room Systems to OmniJoin

OmniJoin's interoperable video conferencing enables a seamless multi-point video conference experience, connecting our web meeting service and your in-room telepresence system like Cisco®, Polycom® and Lifesize®. With this feature, you are able to utilize your in-room video hardware investment, while still gaining the benefits of a web-based online meeting service.

Improve Boardroom Collaboration

Interoperable video conferencing software can be used to bring a much deeper and richer collaboration toolset to traditional, room-based systems. Telepresence systems provide the ability for multiple people to attend a video meeting from a single conference room, but typically lack in collaboration features. OmniJoin offers document, media file, and live desktop, application, and whiteboard sharing – features that are difficult to activate or simply nonexistent in traditional, room-based video conferencing installations.

Attendee List

If any are present, all room systems appear under one 'Room Systems' group in the standard OmniJoin attendee list, grouping them with other attendees such as desktop and mobile users.

Features

- **Telepresence Compatibility** - Video conferencing interoperability supports global standards for room-based systems compatibility.
- **System Requirements** - OmniJoin interoperable video conferencing supports industry standard protocols for room systems including SIP/H.264 and H.323/H.264 for signaling and video; and SIP/BFCP and H.323/H.239 for signaling and data sharing and screen sharing.
- **Performance** - Interoperability supports HD 1080p resolution up to 30 frames/second; and up to two room systems per OmniJoin conference instance.
- **Address Book & Call History** - In addition to manual dialing, OmniJoin supports Address Book and Call History to make it easy for meeting hosts to invite or call room systems.
- **Dial-In & Dial-Out** - To dial-out, an OmniJoin meeting host can select from a room systems' address book, call history, or manually input a room systems' IP address to initiate a connection. To dial-in, an OmniJoin meeting host can generate a dial-in IP address for a room system to call in.
- **Room Management** - The OmniJoin online meeting host can right-click on any participating room system to check connection status details, control meeting privileges, or expel the room system from the online meeting.
