

Telehealth Continues to Drive Better Patient Engagement in 2018

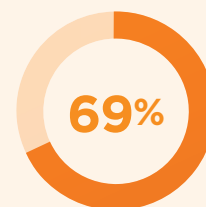

2018

According to a survey of health systems, hospitals and physicians practices conducted by OmniJoin at MGMA 2017, telehealth will continue to play a vital role in changing the current health landscape and improving patient care in 2018.*

50% of survey respondents who have implemented telehealth believe **driving patient engagement** is their top priority.*

In fact, 69% who have implemented telehealth did so to **increase care access** for rural health, home-bound patients and to reach new patients.*

Of those that have not implemented telehealth,

47% believe their top priority for 2018 is **improving care coordination and outcomes**.*

57% of respondents cited that reimbursement complexities to telehealth is **the biggest obstacle** their practice is facing in 2018.*
